

Product
Handled: **Blower Housings**

Problem: Various blower housing sizes and weights are to be handled with the same end-effector. After deburring, the blower housing must be placed onto a pallet in a specific orientation.

APPLICATION: Lift finished machined blower housings from a pallet and place them over the mating impeller assemblies.

SOLUTION: CM Max Pneumatic Balancer on a Gorbel trolley. CAMLOK scissors style end effector. Tool accommodates various payload sizes without adjustment and locator stops for easy positioning onto the payload. As payload is lowered and is supported, the end effector releases and locks open.
