

Product
Handled: **Seat Handling**

Problem: Seat weight increased beyond single operator capability.

APPLICATION: Pick up a 150 lb. seat from a pallet and place inside a tractor cab from either the driver or passenger side.

SOLUTION: A rigid style Vertical Lift Cylinder mounted to a square form trolley with a Unified box rail truck. Custom designed end-effector consisting of three components: spatula, trapping fingers and an air powered round disk to effectively trap the variety of seats being handled.
